What is HTTPS / SSL?

HTTPS (HyperText Transfer Protocol Secure) is the secure version of HTTP used for communication between a web browser and a website. It protects data by encrypting it.

SSL (Secure Sockets Layer) is a security technology that creates an encrypted connection between a web server and a browser. This ensures that sensitive information such as passwords, credit card numbers, and personal data remains safe.

Today SSL has mostly been replaced by TLS (Transport Layer Security), but people still commonly call it SSL.

10 famous browsers used worldwide.

Google Chrome

Mozilla Firefox

Microsoft Edge

Safari

Opera

Brave

Vivaldi

Tor Browser

UC Browser

Samsung Internet

(4). Create a Customer Persona & identify Brand Details for the given
brands
